

Introducing Logistics Management Solution

- ▶ Create unique digital identity for your goods and vehicles

And track them as they move
across the supply chain

Automate track-n-trace at your warehouse to reduce manual intervention

And pair goods to vehicles to get better visibility into the Supply Chain

Configurations

- ▶ **Manage Locations**
- ▶ **Set thresholds**
- ▶ **Configure alerts**

Customize the logistics module to suit
your organizational needs

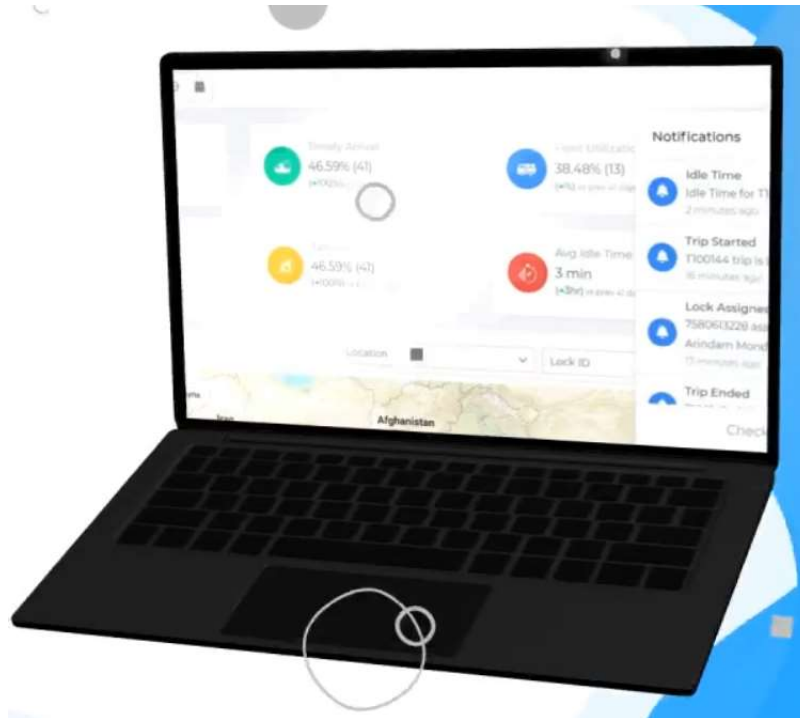

Create and geo-tag warehouse locations

Set thresholds for each route

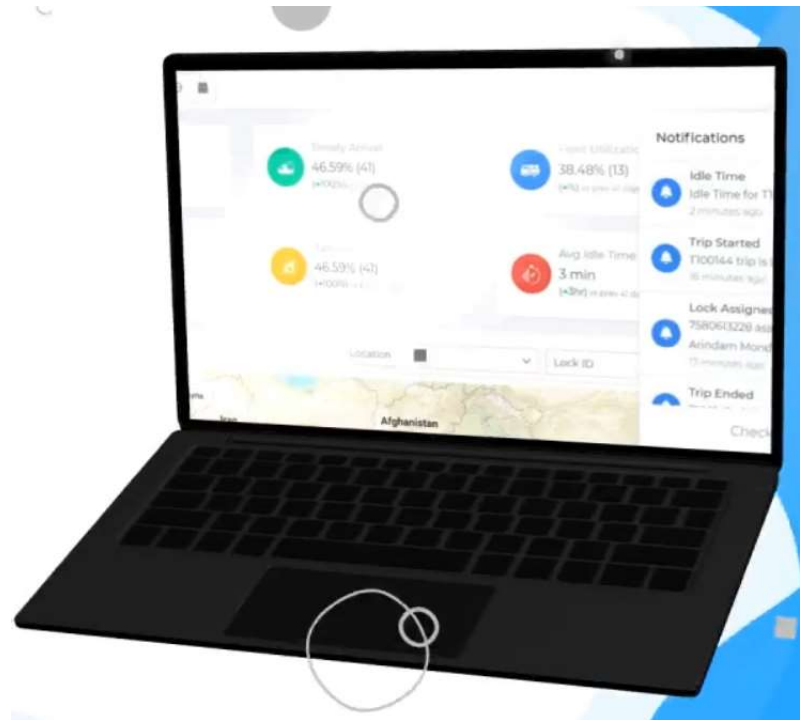

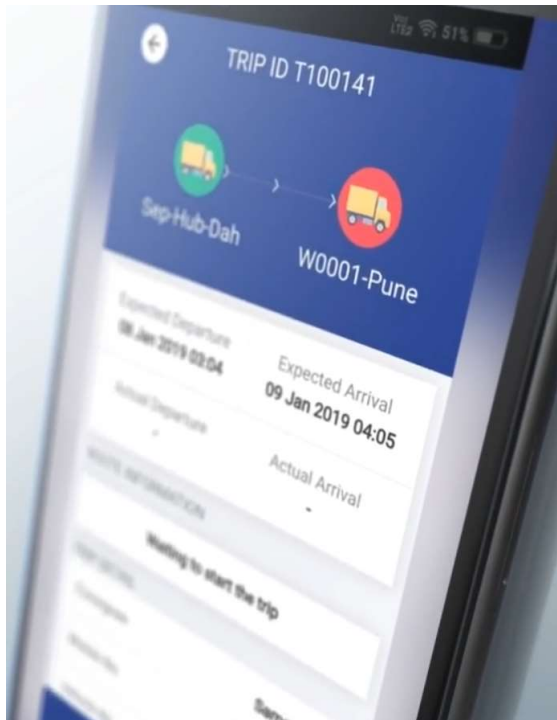

Get custom alerts and notifications in real-time

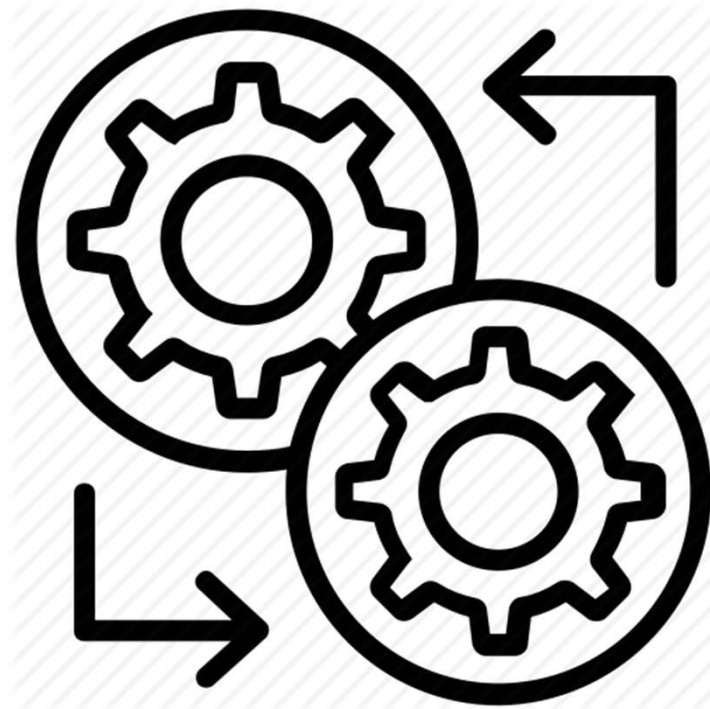

Starting a trip

- ▶ ERP Integration
- ▶ Trip scheduling
- ▶ Lock assignment

Initiate a trip via mobile app & web dashboard

Integrate with ERP for seamless data flow of product data and trip info

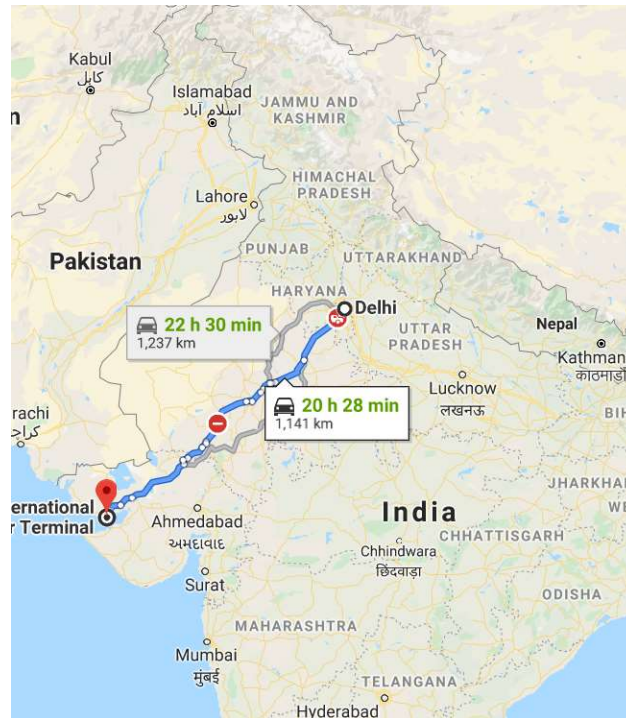

Tracking trips

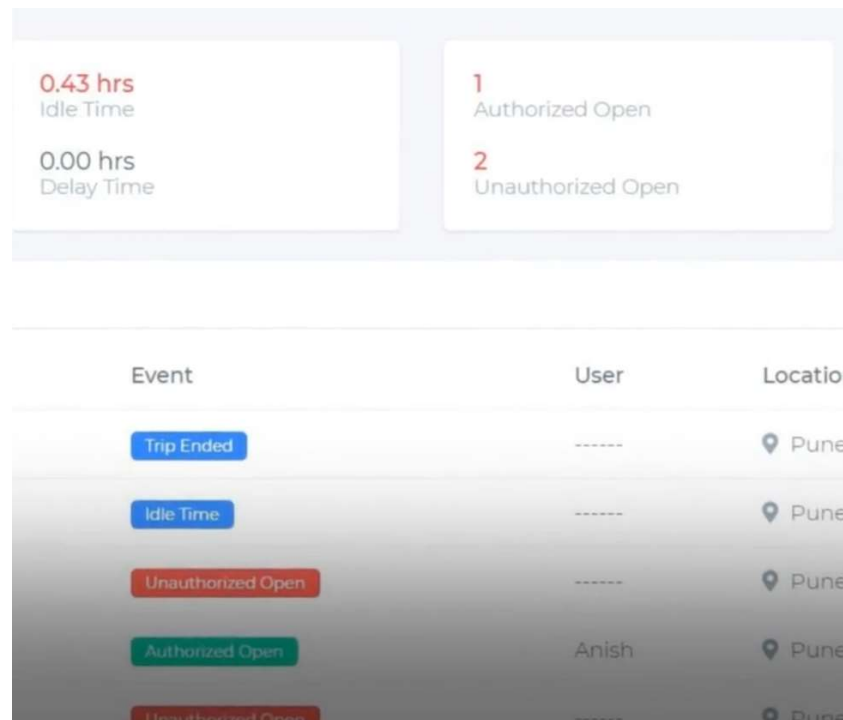

- ▶ Vehicle location
- ▶ Route taken
- ▶ Key events

Track Goods and vehicles in real-time and know the route taken

Track events such as idle time, vehicle change, truck door opening, etc

The screenshot displays a dashboard with two summary cards at the top and a table of events below. The first card shows '0.43 hrs Idle Time' and the second shows '0.00 hrs Delay Time'. To the right, two more cards show '1 Authorized Open' and '2 Unauthorized Open'. The table below lists events with columns for Event, User, and Location.

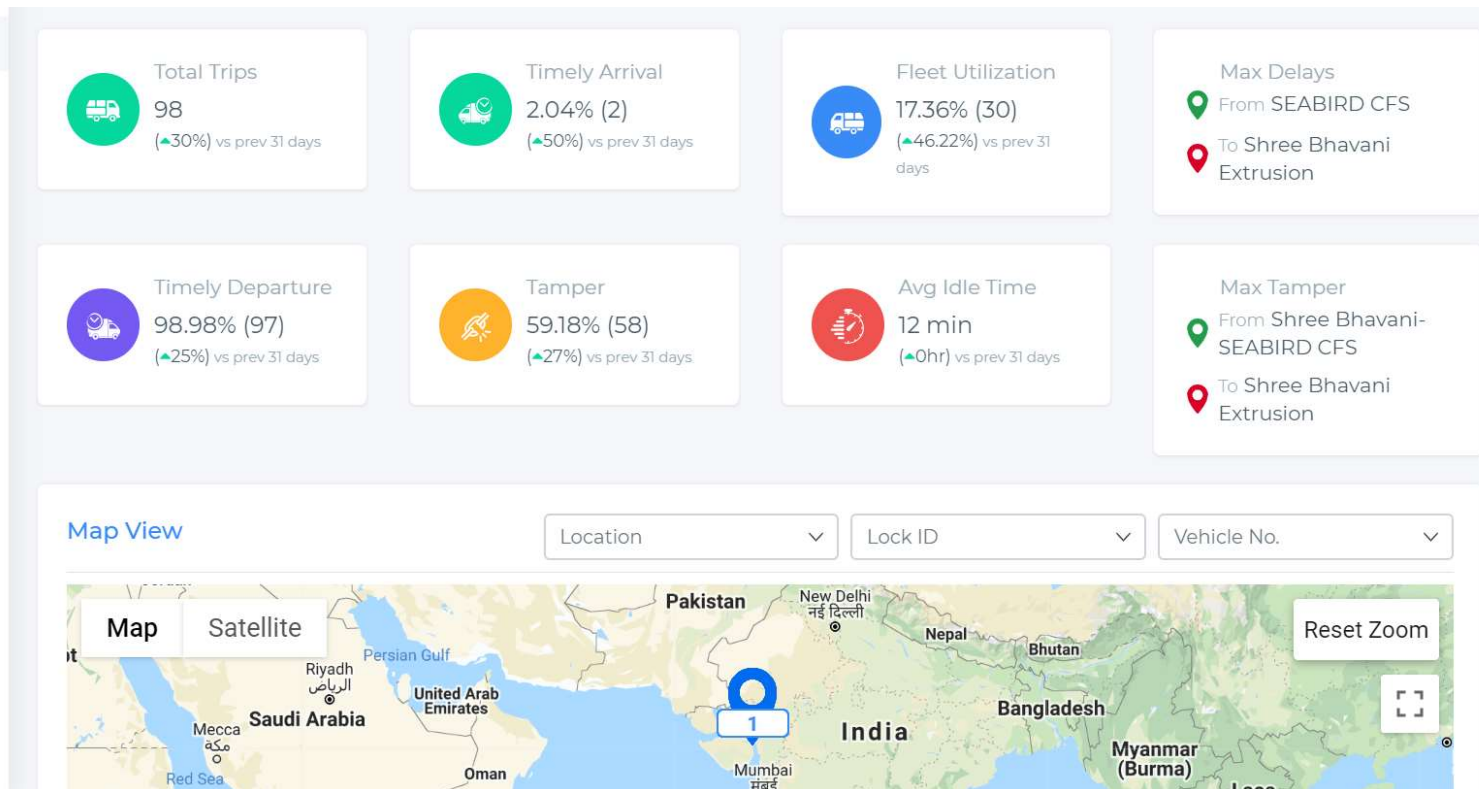

Event	User	Location
Trip Ended	-----	Pune
Idle Time	-----	Pune
Unauthorized Open	-----	Pune
Authorized Open	Anish	Pune
Unauthorized Open	-----	Pune

Analytics

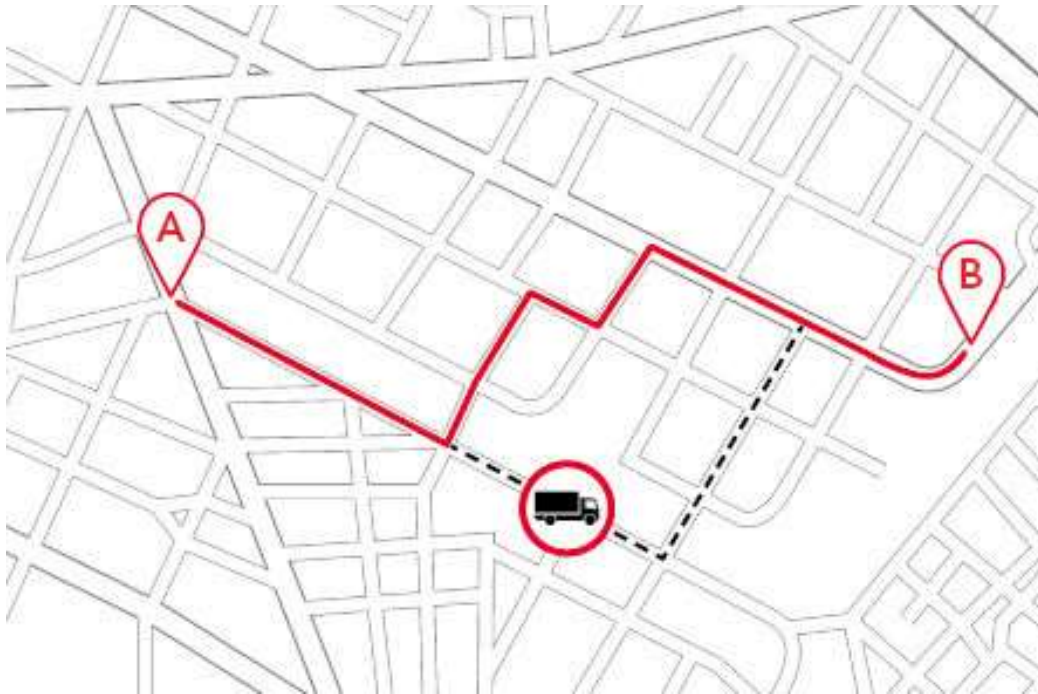

- ▶ Problem routes
- ▶ Timeliness analysis
- ▶ Fleet utilization

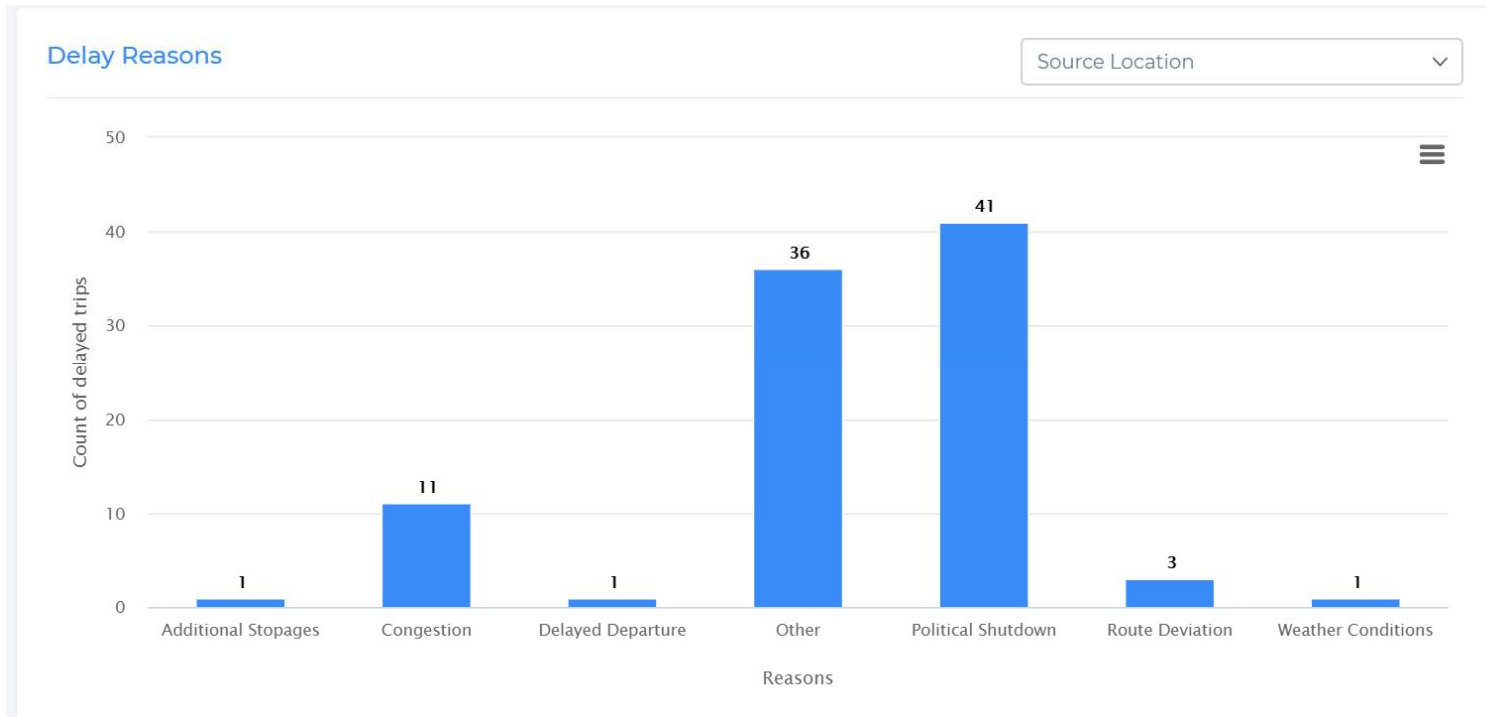

Make better decisions & optimize operations by tracking key metrics

Identify routes with maximum tampering and delays

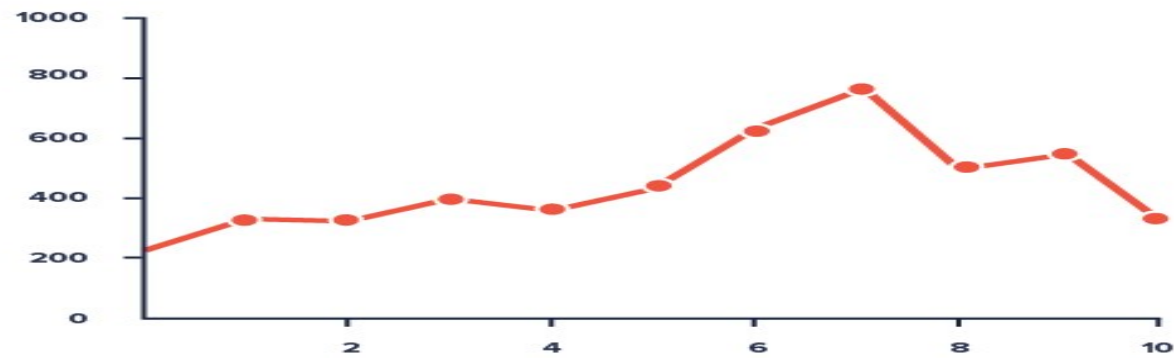

Track timeliness of trip arrival and reasons for trip delays

Monitor Fleet utilization by route and location

Get data and insights by location, fleet owners, time of day etc.

Use AI & ML to optimize supply chain operations
